

Inspection Criteria

There should be a tail lamp garnish between the rear door and the tail lamp and the tail lamp garnish should be supplied individually.

Reason

When there is a tail lamp garnish between the tailgate and the tail lamp and the tail lamp garnish is supplied individually, if the tail lamp garnish is damaged, it is not necessary to replace the tail lamp assembly or the unit, which reduces the repair cost.

Example where there is a tail lamp garnish and the tail lamp garnish is supplied individually.

Good Example

Tail lamp was in contact with the trunk.

After Test

Tail lamp garnish was damaged.

After Test

Tail lamp garnish

As the tail garnish was supplied individually, only the tail lamp garnish was replaced.

Poor Example

Tail lamp was in contact with the glass.

After Test

Tail lamp garnish was damaged.

After Test

Tail lamp assembly

As the tail garnish was not supplied individually, the tail lamp assembly was replaced.
