

Inspection Criteria

The airbag harness or repair connector should be supplied individually so that only the damaged section can be replaced.

Reason

When the airbag harness and connector are supplied individually so that only the damage part can be replaced, it is not necessary to replace the expensive main wire harness even when damage to the connector occurs due to heat from a collision or deployment, which reduces man-hours and parts cost.

Good Example

Part name	Front airbag sensor RH
Connector No.	A26
Connector part No.	90980-12490
Connector color	Yellow
Specification	

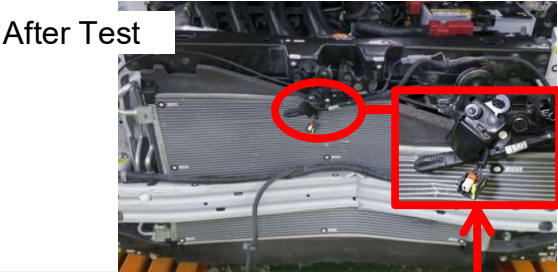

Airbag sensor connector is supplied individually.

Part name	Front seat outer belt assembly LH
Connector No.	U31
Connector part No.	90980-12452
Connector color	Black
Specification	

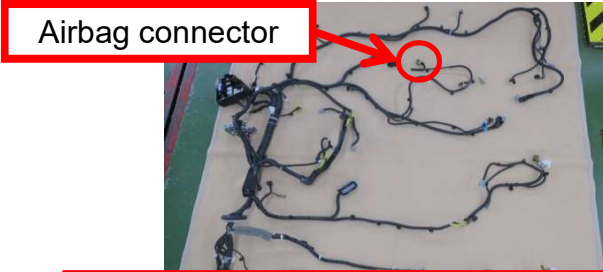

Seatbelt connector is supplied individually.

Poor Example

Airbag sensor connector was damaged.

Main wire harness had to be replaced.

Seatbelt connector was damaged.

Main wire harness had to be replaced.
